

System Integrators

A reliable partner for mezzanine solutions

In addition to deep technical know-how in mezzanine design, MiTek Mezzanine Systems has a proven track record of reliability in project management to deliver solutions on time. Our agility and commitment to quality means that a partnership with us secures benefits for system integrators and their clients:

Global presence

Our ability to handle very large-scale projects to a consistent standard anywhere in the world is underpinned by an agile supply chain that enables rapid project delivery.

Proven reliability

We have a reputation for adhering to detailed project time-lines, allowing phased hand-overs for follow-on trades and the earliest possible completion date.

Enhanced integration

In large or complex projects, we ensure optimal interfaces between the mezzanine solution and automated handling systems or other machinery.

Rapid response

Our in-house technical expertise and engineering software ensure the optimal structural design at the most economical cost, with the ability to modify projects quickly and efficiently.

Engineering quality

Unrivalled strength and stability ensure minimal deflection, with our mezzanine solutions CE marked and our company being ISO 9001 certified.

System Integrator Case Studies

Distribution centre mezzanine for major retail clothing company

Challenge

Design and installation of a multi-level mezzanine solution that would allow for future changes, especially to racking positions. In addition, the mezzanine structure needed to integrate with a number of automated equipment.

Solution

The Mezzanine7[®] solution was chosen as its increase in point load capacity provided the flexibility required. MiTek Mezzanine Systems' in-house software and engineering expertise ensured the mezzanine design met all integration requirements.

Mezzanine floor within fulfilment centre for major e-commerce company

Challenge

Multi-million-pound project with over twenty mezzanine support structures to integrate with various elements of major e-commerce client's automation process. Dedicated high performance/low frequency floor for sensitive scanning equipment needed a customised solution.

Solution

Installation of our Mezzanine7[®] solution and incorporating b-deck40[®] provided the low frequency solution required. Precise project management of multi-installation crews and careful site supervision delivered the project on time and to the client's needs.

Partnership with integrators

MiTek Mezzanine Systems works alongside the world's top system integrators to design and deliver future-proofed mezzanine floors.

"The service we provide surpasses customer expectations," says Matt Loveday, MiTek Mezzanine Systems' Operations Director. "It's a proven philosophy that has enabled us to grow with our integrator clients over the past 30 years."

Global presence

The first global mezzanine company, MiTek Mezzanine Systems has delivered more than 10,000 installations worldwide. Global presence means the capacity to handle very large projects while securing economies of scale, enhanced access to the latest technologies through shared R&D and a wider, more unified service network. "These benefits are particularly attractive for system integrators, who value our ability to meet the needs of international brands in a consistent way across borders," says Matt Loveday.

Quality by design

Automated equipment can be extremely heavy and also highly sensitive to vibration. "Integrators value the strength, stability and quality of our mezzanine structures," explains Matt Loveday. "Our solutions are underpinned by our ISO 9001 and CE marking accreditations, which ensure that quality is guaranteed at every stage, from design to installation."

Agility is key

Although product quality is important, Matt Loveday believes

that it is speed and agility that set MiTek Mezzanine Systems apart. "Integrators often have to modify projects quickly during the project design phase, or even on site. They value our ability to respond rapidly with changes to the mezzanine design, which we can do because we have the software and engineering expertise in house. Our robust supply chain also adds extra agility."

On time, every time

Being a global business enables MiTek Mezzanine Systems to harness new technologies and processes to minimise project delivery times. "We have a reputation for high-speed project delivery, even in phased programmes for large-scale, multi-tier installations," says Matt Loveday. "The faster we can deliver a project, the sooner the end user can profit from it and the happier our integrator clients are. We partner with local suppliers to ensure rapid response and the most cost-effective solution, while also minimising our carbon footprint."

Partnership pays

As well as technical expertise in the design of mezzanine floors and ancillary products, MiTek Mezzanine Systems provides a comprehensive service for building regulations approval and fire protection strategy. "By working on successive projects for an integrator, we get to know their kit and processes really well and that definitely saves time and reduces risk," adds Matt Loveday.
